Summary

Detail-oriented AI Professional with a strong foundation in mathematics, statistical modeling, and deep learning. Experienced in building scalable machine learning pipelines, training neural networks, and deploying end-to-end AI solutions across diverse domains. Proficient in TensorFlow, PyTorch, and LangChain with a focus on NLP, computer vision, and real-time inference systems.

Skills

Languages	Python, SQL	Data Engineering	Data Cleaning, Feature Engineering
AI Frameworks	TensorFlow, PyTorch, Scikit-Learn, LangChain	MLOps Tools	MLflow, Weights & Biases, DVC
Model Deployment	FastAPI, Streamlit, Hugging Face Transformers	Visualization	Power BI, Matplotlib, Seaborn, Pandas
LLMs	GPT, BERT, LLaMA, Ollama, LangSmith	Statistics	Hypothesis Testing, Confidence Intervals
DeepLearning	ANN, CNN, RNN, LSTM, GAN	Version Control	Git, GitHub

Experience

RICR

Bhopal

AI/ML Engineer

June 2025 – Present

- Developed and deployed machine learning solutions using Python, Scikit-learn, and deep learning frameworks for real-world business use cases.
- Performed data preprocessing, exploratory data analysis, feature engineering, model training, evaluation, and hyperparameter tuning to improve model performance.
- Built Generative AI and LLM-based applications using prompt engineering, embeddings, vector databases, semantic search, and RAG architectures.
- Developed REST APIs using FastAPI to integrate and serve AI/ML models in production applications.
- Built end-to-end ML pipelines and containerized AI/ML applications using Docker, following MLOps practices for scalable deployment and monitoring.

ISDC

Bangalore

Data Analyst

Apr 2023 – June 2025

- Collaborated with cross-functional teams including data scientists and business analysts to define data requirements and align with organizational objectives.
- Cleansed and preprocessed raw data by handling missing values, removing duplicates, and resolving inaccuracies.
- Designed interactive dashboards in Power BI, Tableau, and Excel to communicate actionable insights to stakeholders.
- Automated routine data processing pipelines using Python scripts to enhance operational efficiency.
- Provided on-call production support and conducted root cause analysis for critical data issues.

Skill-Lync Private Limited

Chennai

Technical Support Engineer

July 2022 – Apr 2023

- Resolved technical client issues by coordinating across cross-functional engineering and support teams.
- Assessed student technical projects and conducted daily interviews as a qualified technical assessor.
- Implemented multi-factor authentication protocols to secure remote system access.

Projects

LLM Translation API using LangChain and FastAPI

- Developed a lightweight RESTful API using FastAPI to serve LLM models for text translation.
- Integrated LangChain with Groq API (Gemma2-9b-it) to handle dynamic prompt engineering.
- Utilized LangServe for scalable deployment and ChatPromptTemplate for structured output parsing.
- Secured API credentials via environment variables and deployed an interactive Streamlit testing UI.

Research Paper Q&A App using RAG, LangChain, and Streamlit

- Built an interactive RAG application enabling context-aware Q&A over uploaded PDF research papers.
- Generated vector embeddings using HuggingFace and FAISS for efficient semantic document retrieval.
- Powered answer generation with Groq LLaMA 3-70B and implemented recursive chunking for text ingestion.

Next Word Prediction Web App using LSTM, TensorFlow, and Streamlit

- Trained a Recurrent Neural Network (LSTM) in TensorFlow for real-time text autocompletion.
- Preprocessed text corpora using Keras Tokenizer and applied sequence padding and early stopping.
- Deployed the model via Streamlit for interactive real-time predictions using Softmax probability ranking.

LBP Iris Feature Based Gender Classification Using Radial SVM Classifier

- Extracted iris crypt features, HOG, and Local Binary Patterns (LBP) for biometric gender classification using a radial SVM kernel.
- GitHub Repository**

Education

Jabalpur Engineering College

Master of Engineering (Computer Science)

Jabalpur, MP

CGPA: 8.41

Rewa Engineering College

Bachelor of Engineering (Electronics & Communication)

Rewa, MP

CGPA: 6.57

Certifications

Data Science Intern – Innomatics Research Lab

- Developed web applications using Flask and Streamlit to showcase analytical models.
- Built supervised ML models, executed hyperparameter tuning, and performed hypothesis testing.
